

Musculoskeletal System LAB

Outline your hand on the cardstock and cut it out

Cut three straw segments for each finger and two for the thumb, we used the long portion to go down the hand to the wrist.

Line up the straw segments on each finger, make sure they are aligned and tape them down without covering the ends.

Tape the yarn to the back of the hand and then thread it through each finger segment down to the wrist.

Directions: You will be turning in an image of your finished hand as well as 5-7 sentences that explain how this model represents the musculoskeletal system. You will be sure to identify what the paper, string and straws are imulating from the musculoskeletal system. In your writing it should be evident that you not only understand the musculoskeletal system but that you also understand how it works.
