

Name _____

Date _____

There are 5 hexagons and 2 triangles. How many shapes are there?

If your child is ready for a challenge, have them practice counting on from one addend (2 or 5) rather than counting all the shapes.

$$\boxed{7} = \boxed{5} + \boxed{2}$$

7 = 2 + 5
and
2 + 5 = 7
are also correct!

$$\boxed{5} + \boxed{2} = \boxed{7}$$

There are 6 cubes and 2 cylinders. How many shapes are there?

$$\boxed{} = \boxed{} + \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

On another piece of paper, draw some shapes, and make a number sentence to match.
